# HIGH PRODUCTION DISINFECTANT APPLICATION

Regular application of cleaning and disinfectant solutions is the key to infection control. Wagner sprayers maximize application speed whether you are spraying out a small multi-room dwelling, police station or an entire office building.

- Airless sprayers provide high production rates to complete disinfectant jobs faster and with better coverage.
- HEA® (High Efficiency Airless®) spray technology delivers the industry best wetting with a large fan pattern with small uniformed droplets.
- Wagner has the right sprayer for the job with flow rates from 0.5 LPM to 3.0 LPM.
- Delivers maximum ROI with high production rates, inexpensive equipment and ease of maintenance.
- Proven to spray approved products by, Australian Register of Therapeutic Goods (ARTG) for use against COVID-19.

**HEA** HIGH EFFICIENCY  
AIRLESS.

## HEA SPRAY TECHNOLOGY

High Efficiency Airless spray technology delivers the industry best wetting with a large fan pattern with bigger droplets set anywhere from 500–1200 PSI.

### Proven Results

- Lab tested and proven for spraying disinfectant materials
- Remediation contractors have relied on Wagner sprayers for decades

### Lower Pressure. High Production

- Optimizes spray application putting material where it belongs
- The right mix of high production with the right droplet size
- Delivers a consistent wetted surface without over-saturation

### Agile Application

- Spray gun is easy to maneuver for hard to reach areas
- Versatility to extend hose lengths up to 90m
- Built in ergonomics keep you spraying longer with more comfort

## WARNING: SAFETY INSTRUCTIONS

- Follow the manufacturer's safety recommendations for wearing proper PPE.
- Thoroughly read the operating manual of the sprayer before using.
- Review and follow the recommendations contained in the manufacturers material and product safety data sheets.
- The sprayer should always be located outside the area that you are spraying at all times.
- When using any materials that contain Bleach, Hydrogen Peroxide, Quaternary Ammonia, Sodium Hypochlorite, Ethanol, or Hypochlorous Acid, the units should be flushed immediately after each use. Most of these materials are highly corrosive and should never be left in the pumps longer than 15 minutes after spraying.
- Check the filters in the gun and sprayer daily after each use and clean or replace as necessary.
- Do not spray any electrical devices and equipment.

### Handheld sprayers

- The power of airless coupled with the control of HVLP.
- Easy to use and control with a maximum delivery rate of 0.50 l/min

### Recommended Sprayers\*

- Flexio 590
- XVLP FC3500

\*Water based disinfectants only

### One-gun sprayers

- Choose from several one gun sprayers to get the job done
- Portable and powerful sprayers from 1.25 l/min to 2.0 l/min

### Recommended Sprayers:

- Control Pro 250 / 350
- ProSpray 3.20

### Multi-gun sprayers

- Spray with 2 (or more) guns from a single sprayer
- Utilise longer hose lengths, up to 90 metres
- Hopper configurations available

### Recommended Sprayers:

- ProSpray 3.21 (2 guns)
- SF23 Pro / ProSpray 3.25 (3 guns)
- ProSpray 3.29 (4 guns)

## Where can spray disinfection be used?

Particular attention must be paid to areas in daily use, as well as to areas frequented by people who are or were already ill.

- Locker Rooms, Bathrooms, (Sanitary facilities)
- Office Spaces
- Restaurants and food preparation areas
- Education facilities
- Public transport
- Public amenities, entryways and public spaces

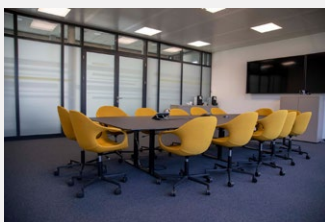

## What types of disinfectant can be sprayed?

### Alcohol Based

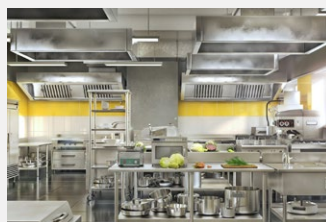

- Ethanol
- Isopropanol

### Water Based

- Aldehyde
- Phenolic
- Quaternary Ammonium Compounds
- Sodium Hypochlorite (Bleach)
- Peroxyacetic Acid
- Hydrogen Peroxide
